Project Name	Smart Leander
Maximum Marks	3 Marks

Define Problem Statements :

Many loan applicants face uncertainty about whether they are eligible for a loan before submitting their application. Traditional loan approval processes are often time-consuming and depend on several factors such as applicant income, credit history, employment status, education, and loan amount. **Smart Lender** uses a machine learning model to analyze these factors and provide quick, accurate, and data-driven loan approval predictions. This helps applicants make informed financial decisions while reducing uncertainty and saving time.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan for the property	Married with no co-applicant income.	Self-employed with a good credit history.	Optimistic about loan approval.
PS-2	A female employee applying for a loan.	Get my loan approved quickly.	My income and credit history may affect the approval.	Loan approval depends on several factors.	Anxious about my financial future.
